

# FLAT WINDOW

Designed for the fruit and vegetable market, Flat Window is made of a coupled material consisting of a sheet of havana paper and a film in PLA. The bag is therefore completely compostable, it can be directly on contact with food and guarantees moisture resistance and an excellent seal. Flat Window is particularly suitable for organic market producers who want to offer their customers an already packaged product, in an innovative and eco-sustainable packaging. Flat Window can in fact be customized with the manufacturer's brand or point of sale and can be sealed with a simple sewing machine.
