

PAPER FILM LAMINATION - TRADITION AND INNOVATION

Products with alternating bands or geometric designs of any shape, coupled with neutral plastic films, metallics or aluminum.

The film guarantees weldability and a barrier to gas and aromas while the paper inserts give the product an artisan look and a solution that combines the charm of traditional packaging with the advantages of an innovative solution.

Possibility of creating valuable alternating effects film-paper with customizable shapes. The wrapping is made with materials derived from corn and it does not leave polluting residues in the environment after use of the product.

The consistency and the machinability of the PLA-paper is of the all similar to that of a common plastic film.

The application is available in roll for a single machine passage.
