

# MICROVAPOR – IN THE MICROWAVE WITHOUT WORRIES

MicroVapor is a thermal valve applied in reels for steaming in the microwave of legumes, vegetables and ready meals without opening the container.

Microvapor is a steam vent valve, which through an innovative register application system is made in specific packaging areas. The valve has a customized design for every need and functional size to the amount of steam to be released from the package.

Allows cooking in the microwave of all food products high in moisture such as legumes, minestrone, potatoes and vegetables in general.

This solution is supplied in rolls.
